

# TT PI

# The details that make the difference...

automatically ready to use  
when held in the hand

slide with ease between  
menu and order screens

fast and intuitive order  
input and correction

biometric finger  
print recognition

operates with finger, nail or stylus

Integrated stylus

cradle charger

secure anti-drop  
attachment

The compact, fast and robust PI Electronique handy is a true thoroughbred perfected over many years since introduction of the first model in 1999.

The screen is manufactured from tempered glass which is extremely tough and is protected by a shock proof shell, resistant to drop, moisture and dust and can be viewed in direct sunlight.

With reliable radio communication and a long battery life the handy ensures a full service is achieved even in the most demanding of restaurant environments.

Designed by hospitality people the PI handy links seamlessly with the PI SPIN touch screens and PI printers.
